

Josef Kardos is a Ph.D. candidate in the Department of Environmental Sciences. Josef received a B.S. in Mechanical Engineering from Cornell University in 1997. He then served four years in the U.S. Air Force working with space launch systems at Los Angeles Air Force Base. Although Josef personally did not go to space, he was often accused of being a space cadet and decided to pursue other avenues in life.

Josef has been assisting the Water Resources Program since September 2004 and has primarily been involved in developing a water quality trading program to implement the phosphorus Total Maximum Daily Load (TMDL) for the Non-Tidal Passaic River Basin. His research is focused on analyzing the effect of model uncertainty on the Passaic water quality trading program.
