TRAINING WORKSHOP:  
STREAM VISUAL ASSESSMENT PROTOCOL

Join Tim Dunne (co-author of SVAP) of the Natural Resources Conservation Service and staff from the Rutgers Cooperative Extension Water Resources Program for a classroom and field training session. Once trained, use SVAP to evaluate streams in your own watershed. SVAP data can provide valuable information leading to preservation and restoration projects. SVAP is an easy-to-use assessment tool to evaluate the condition of aquatic ecosystems associated with streams. SVAP does not require expertise in biology or stream ecology—ANYONE CAN PARTICIPATE.

NEW ADVANCED FEATURE: For those already trained in SVAP, spend the afternoon learning about data interpretation and use and identifying grant opportunities using the data.
